DETAILED ACTION

Restriction

Restriction is required under 35 U.S.C. 121 and 372. This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 1 and 8-22, drawn to a ruthenium powder and sputtering target or thin film.

Group II, claims 23-26, drawn to a method of manufacturing ruthenium powder.

The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Unity exists only when there is a technical relationship among the claimed inventions involving one or more of the same or corresponding claimed technical features. "Special technical features" are defined as meaning those technical features that define a contribution which each of the inventions, considered as a whole, makes over the prior art (Rule 13.2). A review of JP 2001-020065 demonstrates that the technical feature (i.e., a ruthenium powder wherein the alkali components and aluminum content are 0-10 wtppm and 5-50 wtppm, respectively) does not define a contribution which each of the inventions, considered as a whole, makes over the prior art.

Specifically, the far left column of Table 4 of JP 2001-020065 discloses a ruthenium composition, wherein sodium and potassium total 6.753 ppm and aluminum is 5.837 ppm. Ruthenium is 99.95%, translating into a purity of 3N (para. [0040]). Thus, lack of unity becomes apparent *a posteriori*, i.e., after taking the prior art into consideration. Accordingly, the prior art of the record supports the restriction of the claimed subject matter into the aforementioned groups.

Applicant is advised that for the reply to this requirement to be complete, it must include (i) an election of a invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected invention.

Should applicant traverse on the ground that the inventions are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions to be obvious variants or clearly admit on the record that this is

the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Joint Inventors

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Conclusion

No claims are allowed. All pending claims are subject to the restriction requirement.
